

38 Approved For Release 2003/12/19 : CIA-RDP78-04546A003100010005-4

Nanking Chiang-nan Cement Plant which was destroyed during the Sino-Japanese War was rebuilt after the liberation and resumed production in 1950. Principal production facilities--such as 4 rotary kilns--were renovated technically in 1960 and raised the annual production capacity to 75,000 tons. A 32,000 ton shaft furnace was newly installed in 1958.

The plant produces 8 different types of cement including high early strength cement and oil well cement.
